The **6th Global Regenerative Congress** is a multidisciplinary event, bringing together experts from basic science to clinical applications, across all specialties working with regenerative medicine.

Organized by the **Global Regenerative Academy**, this congress provides an independent platform where clinicians, researchers, and academics can gather to exchange knowledge, discuss evidence-based practices, and shape the future of regenerative medicine together.

### — A Multidisciplinary Approach —

Regenerative medicine is applied across specialties including orthopedics, gynecology, urology, dermatology, dentistry, plastic surgery, aesthetic medicine, wound care, endocrinology, nephrology, neurology, sports medicine, immunology, vascular surgery, and more. The 6th Global Regenerative Congress offers a rare opportunity for professionals from all these fields to come together, creating a comprehensive discussion on the present and future of regenerative therapies.

### — Focused on Science and Clinical Practice —

The Global Regenerative Congress places science and clinical evidence at the forefront, fostering open discussions and knowledge-sharing driven by research, clinical outcomes, and best practices.

### — Consensus on Standards for Regenerative Components in Clinical Practice —

The central theme of the congress focuses on developing international standards for the safe and effective use of regenerative components in clinical practice. Experts from around the world will share their research, discuss current challenges, and contribute to building practical guidelines that will support safe, evidence-based integration of regenerative therapies across all fields of medicine.

## JOIN US IN CYPRUS

Set in the beautiful coastal city of Paphos, the congress will also offer excellent networking opportunities, interactive discussions, and the chance to engage directly with key opinion leaders and pioneers in regenerative medicine.
